Amy -- Tuesday is fine. I'll call you at 9 am your time. I don't expect the conversation to take more than about 15 – 20 minutes. I look for to talking with you. Have a great weekend!

Tom

Hi Tom,

I will be at the ASTSWMO meeting, Hal isn't this time. I would definitely be interested in talking to you about this. I was on travel this week, so I am playing catch up here at the office today. Could we talk on Tuesday? I am open, so just let me know if you have some free time.

Thanks!
Amy

Hi Amy –

I hope all is well with you! As you probably know, our team is supporting Katrina Coltrain and Todd Downham at the Wilcox Refinery Site in Bristow, OK. We've done some geophysics work already. Later this month we will begin a direct-sensing investigation using a cone penetrometer testing rig (CPT) equipped with a laser-induced fluorescence probe to detect various petroleum hydrocarbons.

It's much like the rig we tested at Tar Creek, but with a different probe.

At the ASTSWMO conference later this month in Bethesda, MD, some colleagues and I are giving a presentation on how we're using direct-sensing tools with real-time data visualization to more effectively identify areas of concern and remedy options. An important part of the presentation is how we can also work more collaboratively with the states and other stakeholders using these approaches. I'm hopeful Wilcox will ultimately be a good case study. I noticed you are a vice-chair of an ASTSWMO the Remedial Action subcommittee and Hal Cantwell is chair of the Site Assessment subcommittee. Are you planning to attend the conference this year? Either way, do you have a few minutes for a phone call today or sometime next week to discuss a few of the concepts we plan to present at the conference? I'd like to get your thoughts on a few ideas we have. Let me know what works for you, and please extend the invitation to Hal as well.

Thanks and best regards,

Tom
